Discover your Apps with Decipher

Migrate and Modernise legacy codebases to AWS with Version 1

Accelerate Legacy System Modernisation

Decipher simplifies the modernisation of legacy applications by automating the creation of functional and technical documentation. This service, offered as an interactive workshop, facilitates a smoother transition of applications to AWS, speeding up your modernisation efforts.

Decipher is fully customisable and can be tailored to your specification. Our experts guide you through every phase—from initial code upload to full utilisation of Decipher's features—ensuring you derive maximum benefit from this cutting-edge solution for a seamless, cost-effective application modernisation.

- **Intuitive UI-Based Solution:** Experience a user-friendly interface designed for easy access and efficient management. With customisation, this UI seamlessly integrates into your specific workflows, ensuring a smooth and effective user experience.

- **Direct Repository Code Analysis:** Directly access and analyse your legacy codebases from existing repositories. Our service includes configuration support to ensure secure and efficient system evaluations, simplifying your legacy system reviews

- **Advanced Security and AI Tooling:** Stay ahead with the latest in AI technology and vulnerability scanning tools. Our solutions are configured to adhere to strict security standards.

- **Detailed Technical and Business Documentation:** Generate in-depth technical and business documentation tailored to your specific requirements. Our comprehensive documentation enhances your understanding of systems and code, facilitating better decision-making.

- **Integrated Virtual Assistant:** Benefit from real-time, interactive support with our integrated virtual assistant. Optimised for your IT environment, this assistant streamlines queries and boosts efficiency in handling your codebase.

As an award-winning AWS Partner, we're dedicated to helping you fully comprehend Decipher's outputs and delivering strategic insights. These insights are crucial for a successful digital transformation, modernisation, and migration to AWS.

Key benefits:

- Accelerate application discovery and documentation by 10 to 20 times.

- Automatically retrieves and analyses code from existing repositories for streamlined processing.

- Utilises cutting-edge AWS Bedrock GenAI and vulnerability scanning to keep codebases secure and current.

- Includes a responsive virtual assistant for real-time support, fully integrated and optimised for your IT environment.
